

Using Student EI: For Districts

**Innovative ideas for using soft skills data
to make an impact at your district**

IDEA #1

Evaluate your strategic plan

Does your strategic plan include improving graduation rates or developing lifetime learners? Soft skills like work ethic and curiosity have been proven to impact these variables for students. By identifying the soft skills range of your student population, you can more accurately pinpoint gaps that may be contributing to missed goals and a lacking growth mindset.

IDEA #2

Improve attendance rates

This can be achieved in a number of ways with the data in Student EI. Regular attendance is linked to work ethic in students. To start, use the data to create a benchmark for students who have a high rate of attendance. Then, create a cohort of students who struggle with attendance. Using the benchmarks you can identify areas where a student may need support or interventions to help them get to school.

IDEA #3

Move from reactive to proactive

If you're noticing problematic behaviors in your student populations, an intervention may be too late. A targeted, proactive approach requires data that measures skills and uncovers gaps. Student EI delivers meaningful data that identifies skills gaps allowing you to build proactive, targeted and useful interventions.

IDEA #4

Improve school climate

If creating a sense of belonging is important to your district, it starts with teamwork. Student EI's data identifies student groups that may be struggling in this area empowering you to partner with your students to create a safe and supportive environment.
